

Adding a Payment Card to the Ads Account

Takes about 2 minutes · needed once, before the first ad can run

The fall ads are built and ready to go. The only thing left is a card on file — Meta (Facebook & Instagram) won't run any ads until the ad account has a payment method. Once the card is added, text Omar and the ads go live the same day.

On a computer **FASTEST**

- 1 **Log in to Facebook** in your web browser, using the profile that has access to the Valor page and ads.
- 2 **Open this link** — it goes straight to billing for the Valor ad account:

business.facebook.com/billing_hub/payment_settings?asset_id=988827930660651

If that link asks you to pick an account, or you'd rather click there yourself: go to **adsmanager.facebook.com**, click the menu (≡) in the top-left, and choose **Billing & payments**.
- 3 **Check the account name** near the top says **Valor Sports Academy**.
- 4 Click **Add payment method**, choose **Credit or debit card**, and enter the card number, expiration, security code, and billing ZIP.
- 5 Click **Save**. The card should now show under **Payment methods**. That's it — text Omar.

On a phone

- 1 **Open the same link** in your phone's browser (Safari or Chrome) and log in to Facebook if it asks:

business.facebook.com/billing_hub/payment_settings?asset_id=988827930660651

Tip: this page works better in the browser than inside the Facebook app. If the link opens inside the Facebook app and looks broken, copy it into Safari or Chrome directly.
- 2 Confirm it says **Valor Sports Academy**, tap **Add payment method**, choose **Credit or debit card**, and enter the card details.
- 3 Tap **Save** — done. (Alternative: the **Meta Ads Manager** app from the App Store / Play Store — log in, tap the menu, then **Billing** → **Add payment method**.)

IF SOMETHING LOOKS OFF

- **You don't see "Valor Sports Academy," or billing says you don't have permission** — your Facebook profile just needs billing access. Text Omar and he'll add you; it takes a minute.
- **The card gets declined** — Meta sometimes places a small temporary hold (about a dollar) to verify the card; it drops off on its own. If it still declines, the bank may be blocking it — a quick call to approve "Facebook/Meta ads" fixes it.
- **Prepaid or gift cards** can be hit-or-miss with Meta — a regular credit or debit card is the safe choice.
